

**MANAGING
AGING PLANTS
Conference & Expo
USA 2018**

FOR IMMEDIATE RELEASE
September 2017

**SPECIAL STAINLESS STEEL TRACK TO BE PART OF MANAGING AGING PLANTS 2018
CONFERENCE AND EXHIBITION**

*Creating a community dedicated to operating aging infrastructure safely and
efficiently*

Houston, TX—The Materials Technology Institute (MTI) and Stainless Steel World Americas are pleased to present the second **Managing Aging Plants USA Conference & Exhibition**, which will take place on November 13th & 14th, 2018 in Houston, TX. This educational two-day event will be hosted at the newly renovated Royal Sonesta Houston Galleria Hotel, located conveniently in the Galleria business district.

Similarly to the 2016 conference program, the 2018 schedule will include a combination of dynamic Keynote Lectures, informative Presentation Sessions (with each session focused around one overarching theme), as well as interactive Work Shops. There will be at least three conference tracks running concurrently with aging infrastructure-related topics ranging from risk-based inspection (RBI) and best practices to reliability and inspection.

Even though a variety of materials will be discussed over the two-day event, there will be a track devoted solely to stainless steel and corrosion-resistant alloys (CRAs) and how they can be best utilized to assist, and possibly even prevent, aging infrastructure. Topics will include duplex, corrosion, metallurgy, and avoiding failures.
